PRODUCT DATA SHEET - FDV

EN-approved fire blanket with silicone coating

The CGS fire blanket consists of fiberglass fabric with a silicone coating that allows minimal passage of flammable gases.

Easy to keep clean

The CGS fire blanket has a hard plastic cover that is easy to keep clean. This makes it suitable for placement in environments exposed to dirt, dust, or cooking grease, as well as in clinical environments where cleanliness is required. Designed to be quickly unfolded by pulling the handle straps. Hole for hanging and folding instructions on the back.

Effective and quick extinguishing

A fire blanket is recommended as a complement to other fire protection measures. With the help of a fire blanket, you can effectively extinguish smaller fires before they cause significant damage. Additionally, extinguishing with a fire blanket requires minimal post-cleaning.

Keep the fire blanket close at hand so that you can easily access it if a fire occurs, for example in the kitchen or by the fireplace. Always mount the fire blanket on the wall so it is as easy as possible to unfold the blanket in case of an emergency. A fire blanket can also be used as body protection if you need to evacuate a burning building.
